

# - EMPLOYEE VALUE PROPOSITION -

I have a curiosity and keen interest in other people with a passion for helping bring positive products to patient populations. While I want to be successful, I am more interested in being a part of a unique team and bringing value to others. I understand that the more I help others transparently, the more rewards will come my way, but I am most interested in personally growing, stretching and meeting my full potential by investing in others.

I believe in proactivity, positivity, investing in myself, and that challenges are part of the growth process and will be overcome. My personal choice is to look for positives while learning with a glass is half full approach; it's not what happens to me as much as how I choose to handle it. I understand that I can control my attitude, effort and where I focus; to that end I will do my best every day for others while knowing I can always learn, work on my skills, industry knowledge and improve.

I am excited to be challenged, learning and what being a part of the SSI family will help me become while giving me the ability to bring more value to my family and what matters most to me.
